Subject: Oppose any level of glyphosate in our environment, especially our food
Date: Monday, June 05, 2017 2:21:20 PM

To whom it may concern:

My family and myself are **strongly opposed to glyphosate to be sprayed on our food**, or anywhere in the environment. There are numerous experts revealing the damage it is causing. We have so many sick people, the highest it's ever been in this country. Why must we fight to protect our selves and our food? I'm sick of the jargon of needing "scientific proof" that things are safe. It's a chemical for goodness sakes! Anything from Monsanto has never been good. They created agent orange, their chemicals are ruining the top soil and hence the quality of our food and most importantly, it is slowly killing us all!

The proposed level is 1100 micrograms No Significant Risk Level (NSRL) of glyphosate, an ingredient in RoundUp. Studies show 1100 micrograms daily to be far too high of an exposure level. In comparison, chemical 2,3,7,8-Tetrachlorodibenzo-p - dioxin (TCDD), also on the Prop 65 list, has an NSRL Of .000005 micrograms per day. Because **glyphosate has been shown to bioaccumulate and has been shown in the parts per trillion, to increase the growth of breast cancer cells, the reality is that there is no safe level of glyphosate exposure to humans, especially babies.**

Kindly,
Christine DiVinere
